

1. Which type of ideas do you think apply to Shyp? Why? Simplify and Virtualize, because it's taking an activity and making it easier for the users to do that activity
2. Which type of ideas do you think apply to Curofy? Why? Me too and Remix, because it's taking the idea from a startup that already exists and its introducing it to a new market
3. Use [Product Hunt](https://www.producthunt.com/products/lacuna-4) to find a relatively new startup and respond to the following about it: <https://www.producthunt.com/products/lacuna-4>
 - Describe the idea. Lacuna is a flashcard app that helps students study based on when their exam is
 - Describe the type(s) of ideas that apply to it. It is a problem solving and technology idea because it uses technology to make studying easier
 - Is the idea a painkiller or a vitamin? That is, does the idea address users' needs or emotions? Why? For me I considered a painkillers because it helps solve the problem of not knowing what and when to prepare and study for an exam
 - Is the idea easy to monetize? Yes, with subscriptions or premium features like a limit of flashcards, or amount of content you can write in a flashcard
 - Is the idea simple and easy to describe? Yes, you can easily describe it as "a flashcard app to help you study for exams"
 - Is the idea personally relevant? Are you or is someone close to you connected to the idea or the related problem? Yes, as a college or high school student this app can be very useful to study
 - Does the idea have a large market? Yes, millions of students needs help with studying for exams
 - Does the idea have a legitimate secret sauce? Yes, because it helps the student to study around the exams dates instead of just random times

BRAINSTORMING

Problems to solve:

- People have trouble finding a workout partner.
- People lose motivation to go to the gym by themselves.
- College students have trouble keeping track of their spending.
- Students have trouble finding good places to study.
- Students have trouble finding events happening around campus.
- People have trouble finding internships and jobs that fit their schedule.
- People sometimes forget when their car needs maintenance.
- Students have trouble organizing their class schedules.

Ways to solve these problems:

- Create a website that matches people with workout partners based on their goals, schedules, and interests.
- Create a fitness website that tracks workouts and gives users motivation.
- Create a budgeting website that helps students track their income and expenses.
- Create a website that shows and rates good study locations.
- Create a website that puts campus events in one place.
- Create a website that helps students find internships based on their major and location.
- Create a car maintenance website that reminds users about oil changes, tires, and other maintenance.
- Create a website that helps students create and organize their weekly class schedules.

My Idea:

I think that making a combination of the first two problems would be an excellent idea because I think it is useful and interesting. Many people want to work out but have trouble staying motivated or finding someone to exercise with. I also think it would be a good idea where users can be paired with people that share and want to achieve the same goal as them. There're already websites and apps similar to this one but they lack or don't have a good matching system because most of them just paired you up with a coach or someone experienced, but most people want to have a partner where both of them start up together and see each other progress. This idea would be useful to the fitness and health industry because it would help people become more active and stay motivated by making it easier to find a workout partner and gyms businesses could benefit from it by getting more customers.

PRODUCT PROPOSAL

1. Describe the product you have come up with and the type(s) of ideas that apply to it. I have come up with **Gymmies** which connect people with similar goals that want to enter the fitness world but don't have a partner or motivation. I think that Simplify, Remix and Me too, apply to my product because im trying to make a task easier for users by combining two ideas and making it easier for people to find a partner and also there're apps that already exist like this but don't meet most of the requirements users wants
2. How is your product personally relevant to you? Are you or is someone close to you connected to the idea or the related problem? Yes, because for me I have always wanted to go to the gym but have never found the motivation or person to go with, and I always think "oh, how do I start", "what exercise should I do", "what days should i go", "whos going to help me". I think im not the only one that have these problems
3. What problem will your product solve? Finding someone and the motivation to go to the gym
4. What type of website will your product be? (i.e., blog, business, brochure, etc.) Business services with humans interactions
5. Is your product a painkiller or a vitamin? That is, does it address users' needs or emotions? Why? Painkiller because it's solving a real life problem that many people experience
6. Is your product easy to monetize? Yes. It could use premium memberships, gym advertisements, or partnerships with fitness businesses.
7. Is your product simple and easy to describe? Yes, "Gymmies the place to find your gym partner"
8. Who will be the likely users of your product? Does your product have a large market? Yes it has a large market, beginners, athletes, students, and people that want to be more active
9. Does your product have a legitimate secret sauce? Yes, it match users based on their goals, schedules, experience and preferences
