

Defining my Product:

Gymmies is a website designed to help people find workout partners with similar fitness goals, schedules, and interests. Many people struggle to stay motivated or find someone to work out with, so Gymmies make it easier to connect with others. The website will explain how the service works and allow users to explore features such as finding a workout partner, viewing profiles, and choosing fitness preferences. It will be a business and service website with interactive features using HTML, CSS, and JavaScript. The mission of Gymmies is to help people stay motivated, enjoy working out, and build connections through fitness.

Profile of Target Audience:

Primary Audience

Gymmies is designed for college students and young adults who want to exercise, find workout partners, and stay motivated.

Demographics

- **Age:** 18–35 years old
- **Gender:** All genders
- **Country:** United States
- **Location:** Mostly urban and suburban areas
- **Education:** High school graduates and college students or graduates

Socioeconomic Details

- **Average income:** Approximately \$15,000–\$60,000 per year
- **Family status:** Single people and people without children, as well as users with families
- **Occupation:** College students, part-time workers, and full-time employees
- **Work hours:** Approximately 20–40 hours per week

Web Behavior

- **Web usage:** Daily
- **Devices:** Smartphones, laptops, and tablets
- **Common activities:** Social media, fitness apps, online shopping, and searching for information

Name	Gender	Age	Location	Occupation	Salary	Web Use
Marcus	Male	20	Providence, RI	College Student	\$12,000/year	Daily, phone and laptop
Sofia	Female	24	Boston, MA	Medical Assistant	\$42,000/year	Daily, phone
Daniel	Male	29	Hartford, CT	Software Developer	\$75,000/year	Daily, laptop and phone

Visitor	Reasons for Visiting
Marcus	Find a workout partner, improve motivation, and find someone with a similar schedule
Sofia	Find someone to exercise with and stay consistent with her workouts
Daniel	Find a workout partner who matches his experience level and availability

Website Requirements:

Primary goal: Promote Gymmies and demonstrate how the service helps people find workout partners.

Most important action: Encourage visitors to create a profile or explore the workout partner matching feature.

Essential pages:

- Home
- Find a Buddy
- How It Works
- Profile/Login
- Fitness Tips
- About

Main features:

- Fitness goal selection
- Workout type selection
- Experience level
- Location and preferred gym
- Availability
- Workout partner profiles

Homepage

The homepage will highlight the Gymmies name, a short explanation of the service, a “Find a Buddy” button, and information about how the website works.

Look & Feel

Website inspiration:

1. **Strava:** I like its fitness-focused layout and community features.
2. **Nike Training Club:** I like its modern fitness appearance and organized content.

Overall style: Modern, bold, and energetic.

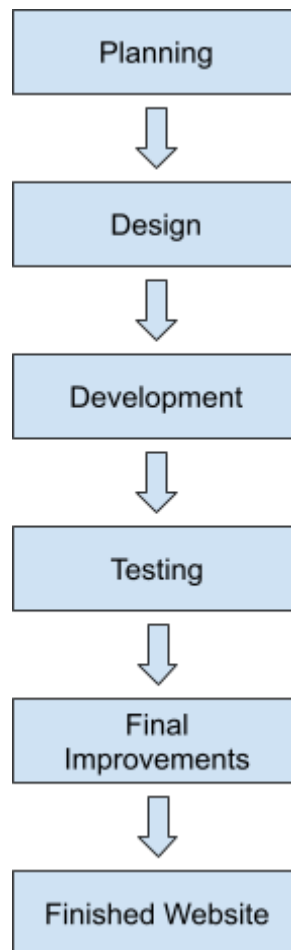

Colors and fonts: I would like to use dark colors with purple accents, bold headings, and clear fonts. The website should feel motivating, active, and easy to navigate

SDLC Approach & Timeline

I will use the Waterfall model to build my Gymmies website. I chose this model because it lets me complete each step before moving on to the next one.

- **Week 1:** Plan the Gymmies idea and target audience.
- **Week 2:** Create the sitemap and wireframes.
- **Week 3:** Design the logo and website layout.
- **Week 4:** Build the HTML pages.
- **Week 5:** Add CSS and website styling.
- **Week 6:** Add JavaScript features.
- **Week 7:** Test the website and fix errors.
- **Week 8:** Make final improvements and complete the website.

Accessibility:

Gymmies will be designed to be easy for everyone to use. The website will use clear fonts, readable text, good color contrast, and buttons that are easy to identify. Images will have alt text, forms will have clear labels, and headings will help organize the information. The navigation will also be simple and easy to understand. I will use tools like Google Lighthouse and WAVE Accessibility Checker to test the website and find accessibility problems.
